

Build Your Own Home Security System

A collection of easy-to-build home security projects, requiring only low-cost, easy-to-find components and a few basic tools to construct. Delton T. Horn, author of Home Remote Control and Automation Projects, shows how to build and install fire and smoke alarms, gas and temperature range detectors, motion detectors, power shut-down/reset timers, a microwave meter, and much more. Seven different burglar alarms for home and auto make this book particularly valuable.
