

Financial Services Partnerships: Labor-Management Dynamics (Routledge Research in Employment Relations)

The purpose of this book is to evaluate the debate on partnership, using original research data. Samuel provides a novel categorisation with which to synthesise and clarify a highly diverse literature on labour-management partnership, thus helping to refine the contemporary partnership debate. Secondly, he clarifies the circumstances under which effective labour-management partnership is possible, while simultaneously elaborating why the achievement of mutual gains is highly improbable in a liberal-market context. Thirdly, the book presents an integrated analysis of the interplay between macro-, meso- (industry) and micro-level factors. Fourthly, the research design enables the study to go beyond the case studies to make defensible empirical generalizations at the level of the industry. Finally, it advances a theoretical explanation of labour-management partnerships in liberal market economies by bridging two opposing neo-institutional positions in the social sciences.
